

Just the email settings please.

If you generally know how to set up your email app and just want to know the settings, then here they are.

You will need to know

- your name
- email address
- password

You can chose either POP3 or IMAP

POP3 downloads the email to your computer and often removes it from the server.

IMAP keeps your email on the server, but downloads a cached copy to your computer. This is recommended when you use multiple devices to check mail, like phones, etc.

IMAP settings

Incoming server: mail.pacinfo.com

Login with your email address

IMAP port 993 with SSL

Outgoing server: mail.pacinfo.com

Authentication required. Login with your email address.

SMTP port 587 with STARTTLS security

POP3 settings

Incoming server: mail.pacinfo.com

Login with your email address

POP port 995 with SSL

Outgoing server: mail.pacinfo.com

Authentication required. Login with your email address.

SMTP port 587 with STARTTLS security
